

DON'T RETURN ME TO THE WATER

PEST FISH

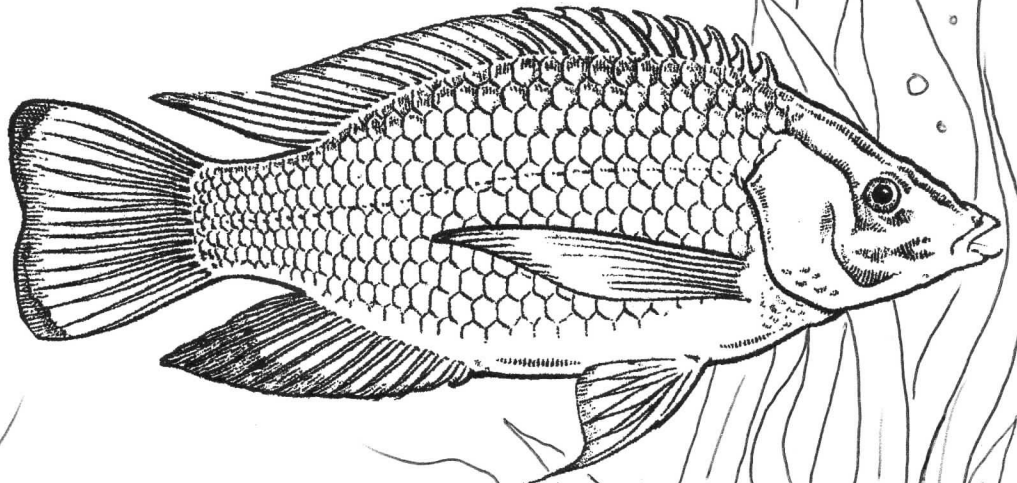

Spotted Tilapia

- There are two species of Tilapia present at Tinaroo Dam and they are capable of breeding several times a year, the females carry the eggs in their mouth. Tilapia eggs can survive inside the females' mouth for over a month on a dry river bank or in the freezer.

This is why Tilapia must never be thrown back into the water, dead or alive. You cannot use noxious fish as Bait.

(Kill humanely and bury above high tide mark.)

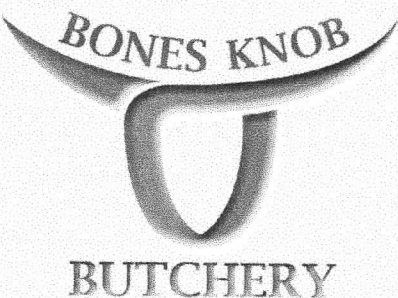

Mozambique Mouthbrooder

TABLELAND HARDWARE **CONSIDER IT DONE**
